Sidelights

Adding sidelights to your door gives a stylish extra dimension to truly make a statement.

Not only do they look so impressive by extending the glazed area across the entrance to your home, sidelights also allow for more natural light to fill your internal living space. They are available across our Signature Esteem, Esteem Arch, Esteem Eyebrow, Elegance Arch and Classical Half Glazed ranges.

Make a statement, not just a door!

Central spring latch and deadbolt provide the maximum strength to the centre of the door

Door lock is combined into a single unit for ease of use and maximum effect

High Security solid steel and nickel plated hooks fully penetrate into the frame both at the top and the bottom

Make a statement, not just a door!

Our composite door range comes with a steel reinforced PVCu outer frame and a variety of multi point locking systems as standard. Detailed above is the optional multi point Autofire locking system that automatically engages the hook bolt system when the door is closed without the need to use Lever handles and as such, is ideal for those that may find such operations difficult. The Autofire door lock is available in a standard handle position or as a High Level alternative with just a key cylinder for that more traditional appearance.

Energy Efficiency

*Doing our bit to keep you snug and warm
in your home.*

Looking after our world and your wallet...

The rising cost of energy bills and the impact on the environment means we all want to keep our consumption to a minimum. One of the best ways to achieve this is to choose thermally efficient products which keep warmth in and cold out, saving money and emission levels.

ENERGY RATING

Throughout our brochure you'll have seen that most doors display an energy rating. These are your guide to the most energy efficient products, with 'A' delivering the highest performance levels.

Tests prove a **Platinum NRG GRP Composite Door** is:-

19%

More thermally efficient than a 48mm solid timber core composite door.

17%

More thermally efficient than a 44mm traditional panelled door.

Doors were tested at the University of Salford's Energy House. This represents a typical Salford 1919 terraced house and its construction represents 21% of the UK's current housing stock. The house has been reconstructed in a fully environmentally controllable chamber, in which climatic conditions can be maintained, varied, repeated and patterns monitored. For the test, the inside temperature of the Energy House was 25°C with an exterior temperature of 5°C.
